

Improve an Existing Webpage with CSS

Instructions Scenario

You have already developed a basic webpage using HTML. Your task is to improve its organization and appearance by adding semantic HTML elements, CSS classes, and an external stylesheet.

Learning objectives

Students will:

- Review and reorganize existing HTML content.
- Add semantic elements such as header, nav, main, section, and footer.
- Connect an external CSS file to an existing webpage.
- Apply colors, typography, spacing, borders, and simple layouts.
- Improve a webpage without removing its original content.

Part 1: Review your existing webpage

Open your existing HTML file and identify:

- The page title and introductory content
- Navigation links
- Main content topics

- Images and lists
- Calendar
- Dropdown menu
- Contact or copyright information

Decide where each item belongs on the page.

Part 2: Organize the existing content

Use semantic HTML elements to create a clear structure:

```
<body>
  <header>
    <!-- Move the existing page title here -->

    <nav>
      <!-- Move or add navigation links here -->
    </nav>
  </header>

  <main>
    <section id="about">
      <!-- Move related introductory content here -->
    </section>

    <section id="details">
      <!-- Move related text, images, or lists here -->
    </section>
  </main>

  <footer>
    <!-- Move contact or copyright information here -->
  </footer>
</body>
```

Students should reorganize their content rather than delete and recreate the entire webpage.

Part 3: Add an external stylesheet

Create a file named `styles.css`. Connect it inside the existing HTML

`<head>`:

```
<link rel="stylesheet" href="styles.css">
```

Add some basic styling:

```
body {  
  margin: 0;  
  background-color: #f4f7fb;  
  color: #243447;  
  font-family: Arial, sans-serif;  
}
```

```
header {  
  background-color: #315c8c;  
  color: white;  
  padding: 24px;  
  text-align: center;  
}
```

```
nav a {  
  color: white;  
  margin: 0 10px;  
  text-decoration: none;  
}
```

```
main {  
  max-width: 900px;  
  margin: 30px auto;  
  padding: 0 20px;  
}
```

```
section {  
  background-color: white;  
  border-left: 5px solid #315c8c;  
  border-radius: 6px;  
  margin-bottom: 20px;  
  padding: 20px;  
}
```

```
img {  
  height: auto;  
  max-width: 100%;  
}
```

```
footer {  
  background-color: #243447;  
  color: white;  
  padding: 15px;  
  text-align: center;  
}
```

Part 4: Complete the improvement challenge

Update the existing webpage so that it includes:

- An external CSS file
- A clearly styled header
- Organized content sections
- At least three navigation links
- Consistent fonts and colors
- Appropriate margins and padding
- Styled images or lists
- A footer
- At least one CSS class

Example CSS class:

```
.highlight {  
  background-color: #fff3b0;  
  border-radius: 4px;  
  padding: 10px;  
}
```

Apply it to existing content:

```
<p class="highlight">  
  This is an important part of my webpage.  
</p>
```
